

Monthly Abstract Bulletin from the Kodak Research Laboratories Volume 2

Filesize: 7.84 MB

Reviews

Merely no words and phrases to explain. I was able to comprehend almost everything out of this created e publication. I am quickly will get a satisfaction of studying a created ebook.
(Cleta Doyle)

To save **Monthly Abstract Bulletin from the Kodak Research Laboratories Volume 2** eBook, you should refer to the link listed below and save the ebook or have accessibility to additional information which are relevant to MONTHLY ABSTRACT BULLETIN FROM THE KODAK RESEARCH LABORATORIES VOLUME 2 book.

General Books LLC. Paperback. Book Condition: New. This item is printed on demand. Paperback. 174 pages. Dimensions: 9.7in. x 7.4in. x 0.4in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1917. Excerpt: . . . A Colorimetric Method for the Estimation of Acetylene A. Schulze J. Chem. Soc. Abst. , 1916, ii, 649 Acetylene may be estimated by the red color produced in ammoniacal cuprous solutions, containing a little gelatine. In a gaseous mixture, as little as 0.001 cc. of acetylene can be detected. Characteristic Reactions of Perchlorates, Periodates, Per-A. Monnier sulphates, Percarbonates and Perborates Chem. Abst. , 1917, p. 426 Precision in Chemical Weighing W. N. Rae and J. Reilly Chem. News, 1916, pp. 187, 200 Colloid Chemistry The Effect of Centrifugal Force on Colloidal E. E. Ayres Solutions Met. Chem. Eng. , 1917, p. 190 The author first reviews the work of Perrin and others on the distribution of colloid or suspended particles in a liquid under a uniform force, e. g. , gravitation, which gives a law expressing the subsidence (or separation) as a function of the particle size and density. Perrin's distribution formula is then applied to separation of suspended particles by centrifugal force, and an analogous expression obtained in which the gravitation! modulus g is replaced by a centrifugal modulus k , where k is a constant equal to Avogadro constant divided by $R T$ (gas const, \times abs. temp.), g gravitational constant, m mass volume times absolute density, is replaced by a centrifugal modulus l $m k f^2 / r$, where the symbols retain their meaning but f revolutions per minute. It is shown that separation is good when b 10 and practically perfect when b 100. A further calculation is given...
